Fig. 1. Monthly Texas coronavirus disease 2019 incidence, hospitalizations, and deaths from March to July 2020. This graph depicts the incidence, average hospitalization days, and mortality rates for Texas from March to July 2020. Monthly cases, mortality, and average hospitalization days increased from month to month, with the highest increases seen from June to July. Although the risk of being infected with coronavirus disease 2019 increased from May to July, the mortality rate significantly decreased in May and June and was insignificant in April and July. Case fatality ratios showed a similar trend, with the highest death case ratio in April and a subsequent decrease from May to July. *Statistical significance of relative risk.
