Lower Intent to Comply with COVID-19 Public Health Recommendations Correlates to Higher Disease Burden in Following 30 Days

Robert P. Lennon, MD, JD, Aleksandra E. Zgierska, MD, PhD, Erin L. Miller, BS, Bethany Snyder, MPH, Aparna Keshaviah, ScM, Xindi C. Hu, ScD, Hanzhi Zhou, PhD, Lauren Jodi Van Scoy, MD

Southern Medical Journal
114(12):744-750, December 2021
DOI: 10.14423/SMJ.0000000000001332

Fig. 3 Correlation between intent to comply and future COVID-19 burden (subsequent 30 days): on the national level, the higher the intent to comply, the lower the future number of cases (P < 0.01). Models controlled for potential confounders including age, sex, race, ethnicity, region, self-reported social status, health conditions increasing risk from COVID-19, and trust in information sources composite score. The bars indicate the 95% confidence interval around the correlation coefficient. COVID-19, coronavirus 2019.
